

CYBERHEART

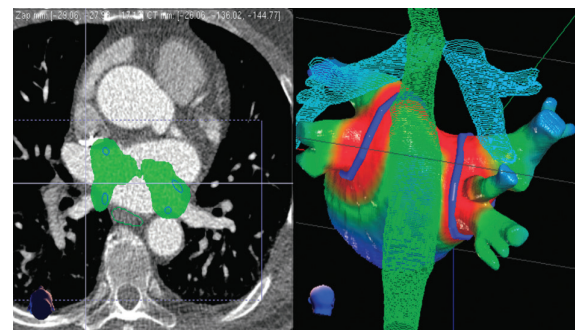

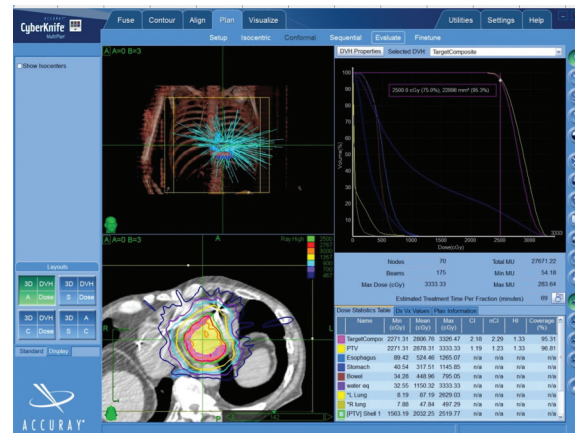

Innovation

CyberHeart™ is a medical device company founded by Dr. Thomas Fogarty and Rod Young that has developed a system to allow cardiologists to *non-invasively* treat cardiac arrhythmias, such as atrial fibrillation, in an outpatient setting and without anesthesia.

Cardiac arrhythmias effect 2.5 million Americans and its treatment accounts for \$6.5 billion in annual healthcare costs. Current therapy (medicines, catheter ablation) is effective for only a small percentage of patients. Cardiac arrhythmia can lead to stroke and heart failure.

The CyberHeart System uses proprietary software to allow for precise external targeting of ablation energy in the heart using radiosurgery.

The technology developed can treat a variety of arrhythmias and cardiovascular applications, including hypertension.

For more information, contact: Patrick Maguire, 650-962-4639 or pmaguire@cyberheartinc.com.

Innovation is the lifeblood of medical advancement and the key to raising the bar for patient care. Yet the traditional process for medical innovation is fraught with obstacles that hinder the development of new ideas. That's why Dr. Thomas Fogarty, a preeminent physician innovator, founded this educational, nonprofit organization. Here, we build upon Dr. Fogarty's invaluable experience to provide a streamlined alternative path for entrepreneurial innovators working on promising new therapies. We hand select several candidates for inclusion in our Innovation Cultivation program, and provide access to expert intellectual, physical, and financial resources designed to propel medical concepts from initiation to application. The program offers direct mentorship every step of the way. CyberHeart is one of the showcase participants in the program.
